

**WELLDONE FOR A JOB
DONE WELL**

ABOUT US

Founded in Kokkola, Finland

We combine Nordic craftsmanship with modern engineering

Shipyards in Kokkola and Porvoo

Our in-house team of over 100 marine professionals ensures that every vessel reflects our promise:

To build the best tools for demanding marine work.

OUR STORY

Kewatec was born from work at sea for work at sea, to fulfil needs and enhance efficiency. Our success is based on understanding the circumstances, the challenges of the jobs, and the risks involved, combined with the insight and capabilities inherent to our Nordic ship building traditions.

Sure, we too build some of the best workboats in the world, but we differ substantially in how we define our work primarily from the perspective of our customers and the end-users. We design and build the best tools, workstations, working units with them and their work in mind. We focus on the job, the operators' working environment as well as the vessel's capability to provide the world's best solutions for demanding work in demanding conditions over its entire lifecycle.

We take an individual perspective on each project. Aspiring for a perfect balance among the customers' needs and desires, the users' work efficiency, safety and comfort, the requirements of the regulators, and the ultimate capability and reliability of the vessel. We start each project from "scratch", but apply our decades of experience, constant drive for development, and emphasis on functionality and reliability to every detail onboard.

Our unique know-how and attitude are evident in our "Seafarer Sense" – our ability to produce solutions that prove agile, effective, functional, and reliable without ever losing sight of the ultimate goal: the capability to build the world's best solutions for the job set for the vessel and its crew. Our attitude is at the core of every project we undertake, guides every one of our specialists involved, and defines every task we perform.

These elements form the basis of Kewatec's reputation for uncompromising quality, economy, and efficiency.

We are proud of the fact that we not only build boats that fulfil our customers' requirements, but vessels that ensure the job always gets well done. The world's best solutions for demanding marine work and conditions.

CERTIFICATIONS & MEMBERSHIPS

Projects built under the following classifications:

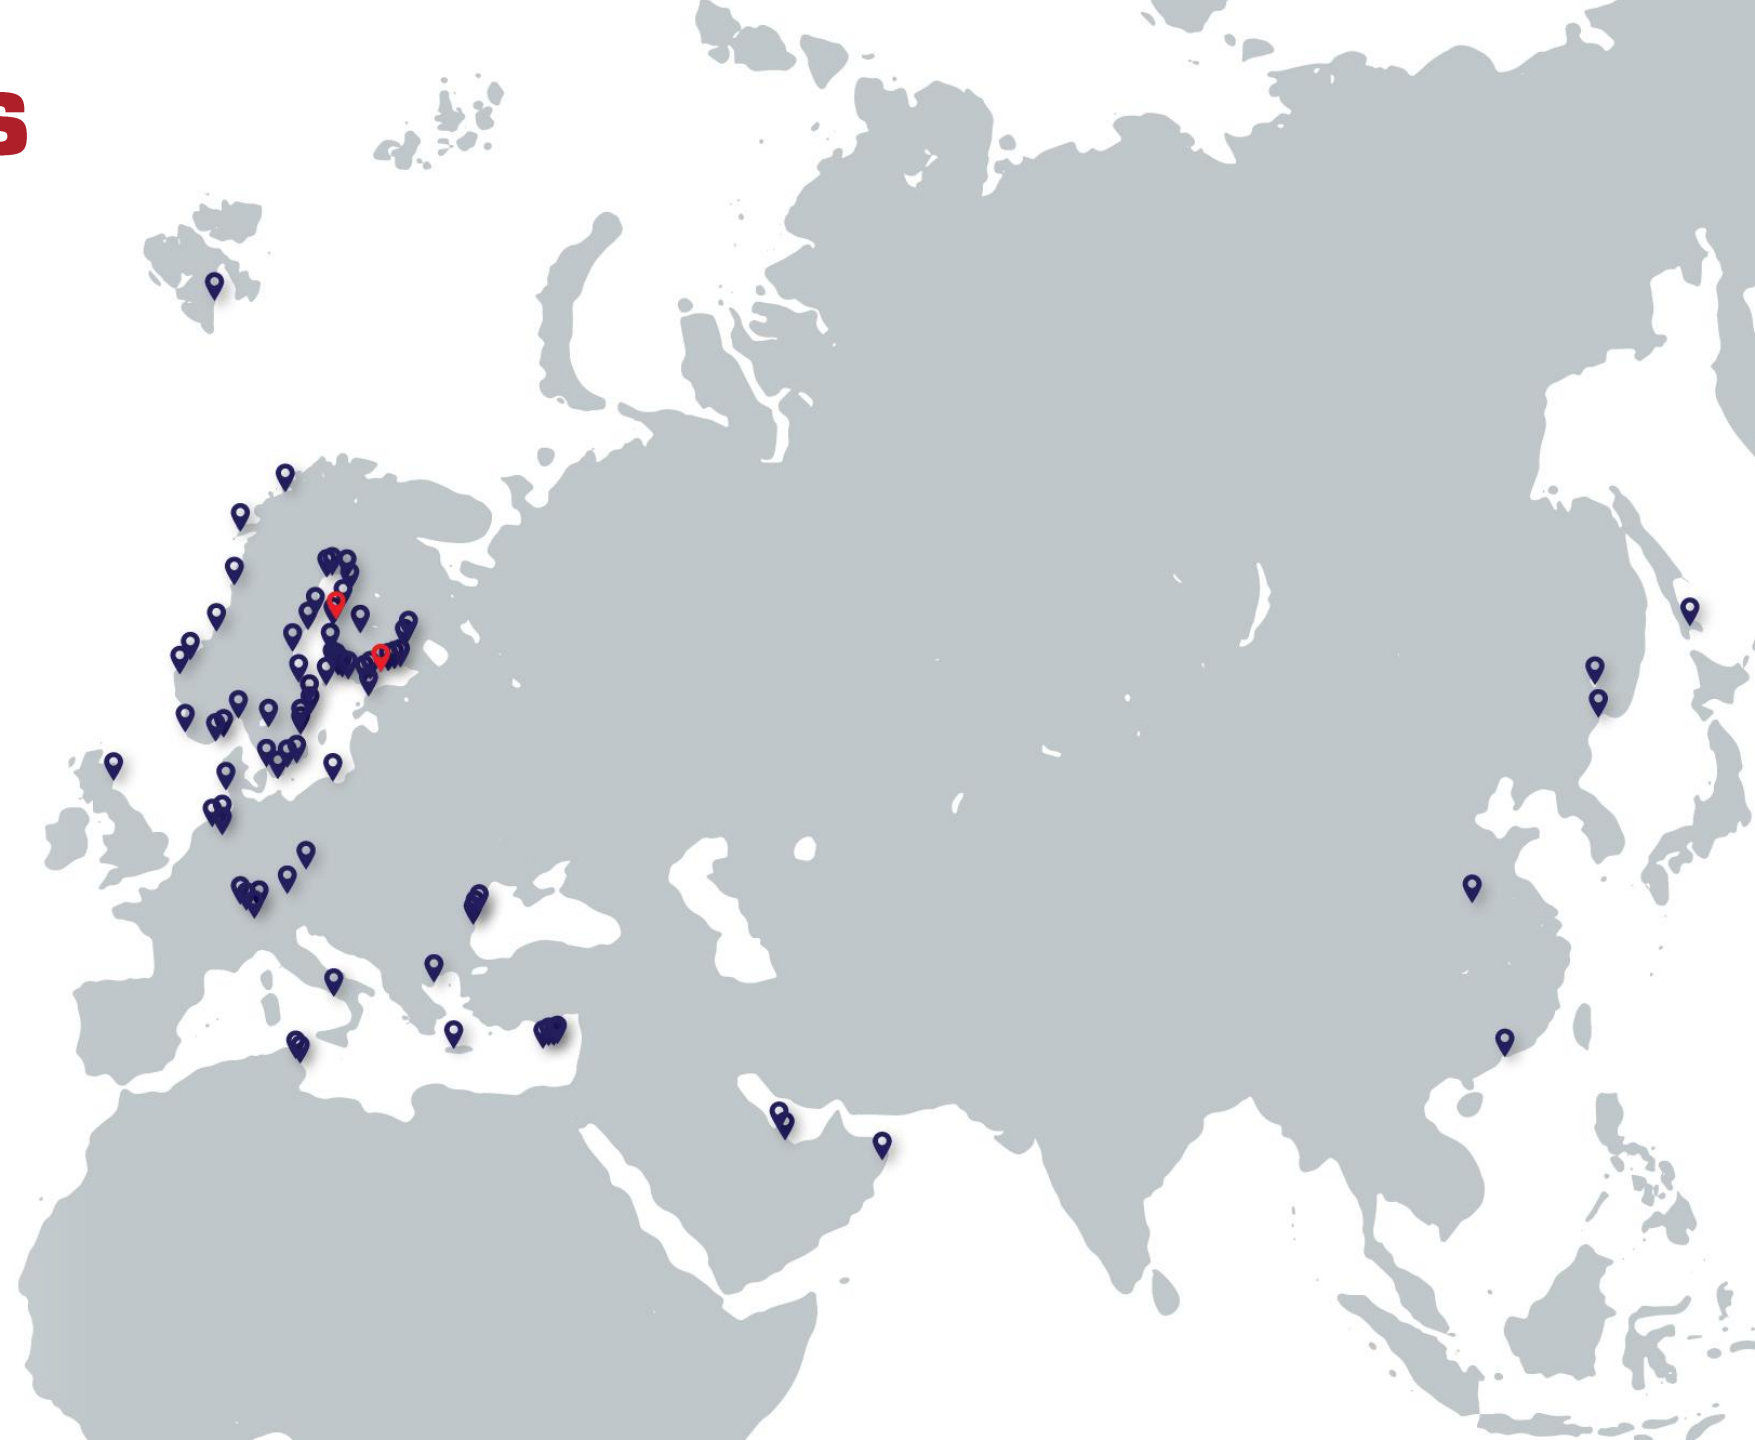

DELIVERIES

Headquarter in Kokkola (FI), operations in Porvoo (FI), strategically located by the sea for easy launch and testing.

Items marked in red are our locations. Blue dots marks deliveries. Deliveries of hundreds of professional boats through the years.

Kewatec is global but local: local partners serve our customers on a long-term basis around the world.
